Education

Integrated M.Sc. in Data Science
Coimbatore Institute of Technology, Coimbatore

August 2020 – April 2025
CGPA: 8.69/10.0

Professional Experience

Software Developer

May 2025 – Present

NGP Websmart, Chennai

- Engineered a modular monolith system in AdonisJS with automated document generation and e-signature workflows, reducing manual processing time by 40 percent and integrating multiple 3rd party e-sign providers seamlessly.
- Architected real-time event-driven systems using webhooks and Pub/Sub messaging, ensuring 99 percent uptime for business operations and enabling instant updates across distributed microservices.
- Led legacy service migration to modern microservices architecture, ensuring zero data loss, zero downtime, and seamless business continuity.
- Resolved database failures under high-concurrency webhook event loads, guaranteeing zero data loss and strengthening performance by integrating Google Cloud Storage for efficient data handling.
- Integrated Slack and email notification pipelines with real-time alerting, cutting incident response time by 50 percent through instant system health monitoring and failure notifications.
- Implemented ETL pipelines for data ingestion from GCP buckets to application interfaces, accelerating data delivery by 35 percent and enabling real-time data access for users.
- Prototyped a hybrid RAG architecture integrating Memgraph with PostgreSQL to power a Q&A agent, exploring graph-relational sync patterns for enhanced knowledge retrieval.

Software Developer Intern

December 2024 – April 2025

NGP Websmart, Chennai

- Developed a centralized authentication system using Firebase and Firestore with RBAC, enabling unified login management across all internal applications.
- Evaluated a third-party e-signature platform, delivering a feasibility analysis and POC that was subsequently advanced to production.
- Constructed a Nuxt.js-based internal dashboard to track document and email lifecycle status, enhancing workflow visibility across teams.
- Analyzed LLM frameworks and RAG pipeline architectures, examining retrieval strategies and embedding models to assess fit for enterprise backend systems.

Data Analyst Intern

July 2023 – December 2023

Clever Insight, Ooty, Nilgiris

- Forecasted November 2023 state elections across Rajasthan, Madhya Pradesh, and Chhattisgarh, achieving 67 percent prediction accuracy via statistical modeling on historical voter behavior and demographic patterns.
- Collaborated with cross-functional data teams to extract, transform, and analyze large-scale datasets, surfacing insights that advanced campaign optimization by 20 percent.
- Partnered with marketing teams to assess product reach metrics and customer engagement patterns, supporting data-driven strategies for market expansion and customer acquisition.

Technical Skills

Programming Languages: Python, JavaScript, SQL

Frameworks and Libraries: Node.js, AdonisJS, Flask, FastAPI, LangGraph, Nuxt.js

Databases: PostgreSQL, MySQL, Pinecone, Firestore,

Tools and Technologies: Machine Learning, NLP, Generative AI, LLMs, RAG, GCP, AWS(S3,Dynamo,Aurora)
Docker, Git, Firebase

Projects

Portfolio Buzz [Live Link](#) | Python, Flask, MongoDB, GROQ

- Developed a portfolio analyzer for stocks and mutual funds, leveraging Llama 3.3 70B to deliver AI-driven investment insights powered by real-time news retrieval.

Enterprise Strategy Synthesis Platform [Live Link](#) | FastAPI, LangGraph, Pinecone, MongoDB

- Architected a multi-agent strategy platform using LangGraph, orchestrating parallel research, financial, and regulatory agents with RAG-powered retrieval to synthesize consulting-grade reports in under 90 seconds.
